Accurate Diagnosis of your temporomandibular joint dysfunction is necessary prior to treatment. Magnetic Resonance Imaging (MRI) is the best method for reaching this diagnosis. The following information will be needed if your medical insurance policy requires an in-network physician to order the MRI.

MRI of the Temporomandibular Joint

Bilateral

Open and Closed Positions

Coronal and Sagittal views

To Rule out internal joint derangement and soft tissue pathology.

NO CONTRAST REQUIRED

Please request a copy of the MRI report to be sent to Dr. Gary DiStefano.

Also, please bring a copy of the images, film or CD, to your next appointment.
